

# What Makes BioSNEDS™ Different

DOMINATING THE BIOAVAILABILITY BATTLE  
WITH PHARMACEUTICAL PRECISION

BioSNEDS™ follows Big Pharma's move away from liposomal to the more effective SNEDDS (Self-Nano Emulsifying Delivery Systems) for oral delivery, patented in 2012.

We've transformed SNEDDS into BioSNEDS™, making this advanced pharmaceutical technology accessible to the nutraceutical industry for the first time.

This innovation remained out of reach for nutraceuticals due to clean-label constraints—until Verdant Nature intervened.

BioSNEDS™ represents a clean-label, self-emulsifying delivery system utilizing nonGMO, GRAS lecithin, coconut/palm fatty acids, beet sugar, glycine, vegetable glycerin, vegetable dextrin

Gone are the days of guesswork in supplements and skincare. BioSNEDS™ leads with precision, offering the first cell-targeted delivery system that drives active ingredients to reach their intended targets.

# The BioSNEDS™ Advantage

UP TO 100 X MORE BIOAVAILABILITY

## AMPLIFIED BIOAVAILABILITY

BioSNEDS™ enhances solubility, permeability, and absorption of active ingredients, leading to increased bioavailability and delivery to cells.

## LOW DOSES, HIGH IMPACT

Due to amplified bioavailability, BioSNEDS™ enables lower doses with enhanced efficacy,

## ENHANCED STABILITY

Increases the stability and molecular integrity of active ingredients and extends shelf life.

## CLEAN LABEL

Clean, green, consumer-friendly ingredients, free from harsh chemicals.

## LYMPHATIC SYSTEM UPTAKE

The hallmark of BioSNEDS™ is its unique ability to bypass hepatic first-pass liver metabolism, preserving active ingredients to increase bioavailability and delivery to cells.
